

Buccal Tube

✓ For Molars

80 Gauge Mesh Pad sand blasting & Negative angles undercuts	• increasing surface area • Increase adhesion
Central compartment	• Avoid the vacuum formation • Allowing the adhesive to flow evenly over the bonding base
Exclusive Geometry of the base	• Perfectly adaptation to the tooth
Anatomically contoured & Central channel	• Better positioning
Vestibular groove	• Avoid occlusal interference • Facilitate positioning
Funnel shaped entrance	• Easy insertion • Low friction
Number of slots	• Double & Triple
Laser porosity engraving	• Increased Mechanical Retention • More Consistent Bonding • Compatible with Light Forces
Accommodation For tweezers (Flat Surface)	• Secure bonding
Ball Adaptive Hook	• Comfort to patient
