

# GYPSUM TYPE IV

## Extra Hard Dental Die Stone

✔ is a high quality general purpose model stone for use in crown and bridge procedures. The easy flow characteristics during impression casting combined with low expansion and high surface density results in models suitable for all types of crown and bridge technical production. The BMS Dental Gypsum Type IV can also be incorporated for producing models, resistant to pressure, during injection moulding techniques with acrylic resin.

### ✔ Technical characteristics

| Mixing ration                 | Mixing time<br>(hand mix) | Mixing time<br>(vacuum mix) | Working time |
|-------------------------------|---------------------------|-----------------------------|--------------|
| 20-22 ml<br>water/100g Powder | 1'                        | 30'                         | 7'           |

| Setting Time<br>(Vicat) | Setting<br>expansion | Compressive<br>strength |
|-------------------------|----------------------|-------------------------|
| 11'                     | 0,10%                | 805,5 kg/cm2            |
